

## ENERGY POLICY

As part of its *Corporate Social Responsibility*, IMA Industria Macchine Automatiche S.p.A. considers it a strategic objective to adopt strategies that aim to continually improve the organisation's energy performance and reduce its energy consumption, in full compliance with current energy legislation, as well as any other requirements subscribed to in this area.

To achieve this objective, IMA Industria Macchine Automatiche S.p.A. has implemented an Energy Management System (EMS) in compliance with standard UNI CEI EN ISO 50001/2018, within the defined scope and boundaries of the System.

Through a systematic PDCA (Plan-Do-Check-Act) approach, focused on efficient energy management, the Organisation is committed to promoting the achievement of the following objectives:

- pursue the continual improvement of EMS performance through collaboration and coordination among company resources and proper use of energy sources, ensuring the reduction of environmental impacts generated by the company's activities;
- define and constantly update work procedures and instructions with a view to reducing and ensuring rational use of energy;
- ensure full and substantial compliance with the applicable legislative requirements on the company's use of energy;
- involve stakeholders, inside and outside the Organisation, in EMS-related activities;
- prefer innovative technological and management solutions aimed at reducing energy consumption and increasing the use of energy produced from renewable sources;
- support the procurement of energy-efficient products and services, using energy performance as one of the main assessment criteria in the purchasing phase;
- set out innovation and continual improvement goals in energy use, allocating the necessary resources for their achievement, through the definition of an Energy Management Team;
- Actively participate in the transition towards sourcing electricity entirely from renewable sources by acquiring Guarantees of Origin (GO) that certify the renewable nature of the energy consumption across our production facilities;
- Develop and implement an electrification strategy to progressively replace fossil-fueled air conditioning systems with advanced, sustainable technologies. In new buildings, design efforts prioritize the use of electricity, preferably supplemented by on-site renewable energy generation.
